2. The floorlike platform of a horizontal section, or compartment, of a ship. The deck names in modern merchant vessels vary so greatly that no exact statement regarding them can be given that is entirely uniform, though certain general types are observed. Small vessels have but one deck (the main deck), and are called **single-deck vessels**. Where the single deck steps to a higher level aft the vessel is called a **raised-quarter-deck vessel**; where there are two steps the vessel is a **well-deck vessel**. **Two-deck vessels** have a main and lower deck. The decks of a **three-deck vessel** are the **upper deck** (weather deck), those below being **main deck**, **lower deck**, **orlop deck**, and **platform deck**. The decks of a **hurricane-deck vessel** are the **hurricane deck** (weather deck), and below main, lower, orlop, and platform deck. In the large merchant vessels the decks are named from the weather deck that designates the type of vessel. Thus, the decks of a **shelter-deck vessel** are **shelter deck** (weather deck), and below this the upper, main, lower, orlop, and **platform deck**, and above the shelter deck there may be **bridge deck**, **promenade deck**, and **boat deck**. The decks of a **spar-deck vessel** are **spar deck** (weather deck), and below **main**, lower, orlop, and **platform deck**, and above the spar deck there may be **bridge deck**, **promenade deck**, and **boat deck**. In naval usage: a The highest deck extending from stem to stern is the **main deck**. A partial deck above the main deck at the bow is called the **forecastle deck**; at the stern, **poop deck**; amidships, **upper deck**. The name *upper deck* is also applied to such a partial deck extending from the waist to either bow or stern, in which case the name *forecastle deck* or *poop deck*, as the case may be, is not used. A partial deck above the main deck amidships, the space under which is not inclosed, or consists of small compartments, is called **bridge deck**. b The first deck below the main deck, which is used primarily for berthing purposes, and on which no guns, or light rapid-fire guns only, are carried, is called the **berth deck**. This is usually the deck at or next above the water line. A complete deck on which guns are carried between the main deck and the berth deck is called the **gun deck**, or if there are two such decks the gun deck and the **lower deck**, respectively. c A partial deck below the berth deck, if located on or above the protective deck or the water-tight deck, is called the **orlop deck**; if below the protective deck or the water-tight deck, the **platform**. If there are two platforms, at different levels, they are **upper** and **lower platform**. Where there is no protective or water-tight deck, the same nomenclature is followed, the deck below the berth deck being called the **orlop deck**. d A deck of extra strength and thickness of plating, worked for protective purposes, is called the **protective deck**. e The deck with sloping or curved sides in similar vessels, worked similarly to a protective deck, but not of extra strength and thickness above structural requirements, is called the **water-tight deck**. f A deck worked for protective purposes below the protective deck and as a separate construction, and not as plating on lower side of the protective-deck beams, is called the **splinter deck**.

DECORUM.] Suitable to a character, or to the time, place, and occasion; marked with decorum; becoming; proper; seemly; befitting; as, a *decorous* speech; *decorous* behavior. "A *decorous* pretext." *Motley.*

Syn. — Decent, proper, fitting, seemly; sober; settled, composed, calm, quiet, serene, unruffled; grave, steady, regular. — DECOROUS, DEMURE, SEDATE, STAID. That is DECOROUS (see DECORUM) which is proper and becoming, esp. as judged by formal or conventional standards; as, "our reaction from the *decorous* platitudes of the last century" (*Lowell*); "Congratulate yourself if you have done something strange and extravagant and broken the monotony of a *decorous* age" (*Emerson*). DEMURE implies an affectation of decorum or modesty, frequently with a suggestion of coyness; as, "They were . . . giving each other the wink; but the moment they caught my eye they pulled grave faces, and were exceedingly *demure*" (*Irving*); "your puss, *demure* and pensive" (*F. Locker*). SEDATE implies composure and soberness of character or speech; as, "Good sense alone is a *sedate* and quiescent quality" (*Johnson*); "He was . . . of a *sedate* look, something approaching to gravity" (*Sterne*). STAID implies a more settled gravity, an even stronger negation of volatility or frivolity, than *sedate*; as, "The side streets here are excessively maiden-lady-like. . . . The knockers have a very *staid*, serious, nay almost awful quietness about them" (*Keats*) See CALM, COOL, EARNEST, GENTLE.

☞ Usage seems to be about evenly divided between the two accentuations given above. *De-co'rous*, following the Latin (see etym. and cf. also DECORUM and SONOROUS), is preferred by all recent leading authorities.

— **de-co'rous-ly**, *adv.* — **de-co'rous-ness**, *n.*

2. A seemly and fitting act; an act demanded by the social contingency or general custom.

Syn. — Decency, seemliness; loftiness, stateliness, majesty; fitness, appropriateness; modesty. — DECORUM, DIGNITY, PROPRIETY. DECORUM (see DECOROUS) applies esp. to that which is decent or becoming in manners or conduct; it frequently implies little more than the absence of all that is unseemly. DIGNITY suggests such becoming elevation of style, manner, or conduct as arises from inner nobility or worth, or from a proper consciousness of one's position or responsibilities. PROPRIETY is a somewhat more relative term than *decorum*; it implies consonance with recognized standards of what is fitting or correct. See DELICACY, FIT.

If gentlemen of that profession [the army] were at least obliged to some external *decorum* in their conduct . . . it is impossible the corruptions there should be so universal. *Swift.*

de-crease' (dē-krēs'), *v. i.*; DE-CREASED' (-krēst'); DE-CREAS'ING. [ME. *decrecen, discresen*, fr. OF. *decreistre, descreistres* (3d pl. pr. *-creissent*), F. *décroître*, fr. L. *decrescere* to grow less, or LL. *discrescere*; *de* (or *dis-*) + *crescere* to grow. See CRESCENT; cf. INCREASE.] To grow less, — opposed to *increase*; to be diminished gradually, in size, degree, number, duration, etc., or in strength or quality; as, the days *decrease* in length from June to December.

He must increase, but I must *decrease.* *John* III. 30.

Syn. — Lessen, decline, wane, fall off, shrink, waste, abate, subside. — DECREASE, DIMINISH, DWINDLE agree in the idea of lessening (see ABRIDGE, CONDENSE). DECREASE commonly suggests a process going on in that which grows less; DIMINISH frequently suggests a lessening by taking something away: consequently *decrease* is chiefly used as an intransitive verb, referring to the process, and *diminish* as a transitive verb, implying the operation of an outside agent; as, a flood, the cold, the length of autumn days, *decreases*; an army may be *diminished* by disease, one's prospects through extravagance; "a *decreasing* leg? an increasing belly?" (*Shak.*); cf. "His [the fool's] part declines as the drama advances, *diminishing* markedly at the end of the sixteenth century" (*A. C. Bradley*). The two words, however, are often interchanged. DWINDLE implies becoming smaller and smaller, usually until the limit reached is insignificant or even contemptible; as, "Our proper names . . . generally *dwindle* to monosyllables" (*Addison*); "The House of Commons is *dwindled* into a very dialogue between Pitt and Fox" (*Walpole*). Cf. ABATE.

Weary se'nnights nine times nine

deed. Obs. or dial. Eng var.

deed (dēd), *adv.* Short for INDEED. *Colloq. or Dial*

before it has been given effect by delivery. In its broadest or general sense *deed* properly includes every such instrument; but it is often used specifically of an instrument conveying a fee in land, as distinguished from a lease, mortgage, or other instruments under seal. A will, although under seal, is not a deed, because not delivered and accepted. The formal parts of a common-law deed of land are the premises, habendum, reddendum, conditions, covenants, and conclusion. Signature is not essential at the English common law to the execution of a deed; but it is practically universal, and is required along with acknowledgment in many jurisdictions in the United States.

The technical use of the word *deed* seems the outcome of the very common plea *Non est factum mean, Nient mon fet*, i. e., I did not execute that document. As a word which will stand for the document itself, it slowly supplants *carta*, it is thus used in Y. B. 33-5 Edw. I. p. 331. *Pollock & Mat.*

Syn.—Mar, injure, spoil, ruin, distort.—DEFACE, DISFIGURE, DEFORM agree in the idea of marring. To DEFACE is primarily to mar the face or external appearance of anything; it frequently implies the effacement, obliteration, or removal of some part or detail; as, "The splendid armor of the combatants was now *defaced* with dust and blood" (*Scott*); "Earth has yet a little gilding left, not quite rubbed off, dishonored, and *defaced*" (*Hazlitt*). DISFIGURE (cf. TRANSFORM), as applied to a surface, implies deeper or more permanent injury than *deface;* as applied to figure or conformation, it frequently suggests such impairing of beauty or attractiveness as results from other than structural injury; as, "The smallpox . . . fell foul of poor little Oliver's face . . . and left him scarred and *disfigured* for his life" (*Thackeray*); "A few of those instances in which vanity or caprice have contrived to distort and *disfigure* the human form" (*Reynolds*). DEFORM applies esp. to such distortion as is deep-seated or structural; as, "An anatomist . . . would have seen that the *deformity* of Philip's spine was not a congenital hump" (*G. Eliot*). See ERASE, BLEMISH, CONTORT; cf. FORM.

‖ **de fac'to** (dē făk'tō). [L.] Actually; in fact; in reality; —distinguished from *de jure.* A *de facto* corporation, court, officer, or the like, must exist under a claim and color of right, which requires that there should be possible a de jure corporation, court, officer, or the like.

One . . . [kind of *de facto* government] is such as exists after it has expelled the regularly constituted authorities from the seats of power and the public offices, and established its own functionaries in their places, so as to represent in fact the sovereignty of the nation. Such was the government of England under the Commonwealth. . . . As far as other nations are concerned, such a government is treated as in most respects possessing rightful authority; its contracts and treaties are usually enforced; its acquisitions are retained; its legislation is in general recognized, and the rights acquired under it are, with few exceptions, respected after the restoration of the authorities which were expelled. . . . The other kind of *de facto* government . . . is such as exists where a portion of the inhabitants of a country have separated themselves from the parent state and established an independent government . . . If it fail to establish itself permanently, all such acts perish with it. 96 *U. S.* 176, 185–6.

POSTPONE is more definite, it is frequently employed when something is deferred to a particular time; as, the meeting was *postponed* for a week. PUT OFF is more colloquial than *postpone*; it frequently implies disinclination to act at once; as, Never *put off* till to-morrow what can be done to-day. To PROCRASTINATE (see etym.) is to put off habitually or in a dilatory fashion, esp. from day to day; as, to *procrastinate* a decision; "I *procrastinate* more than I did twenty years ago" (*Swift*). Syn. — Submission, complaisance, consideration; regard, esteem, honor; veneration, awe, dread, adoration. — DEFERENCE, RESPECT, REVERENCE. DEFERENCE implies a courteous yielding or submission of one's own judgment, opinion, or preference to that of another; as, "A certain *deference*, not to say servility, to the heads of colleges is perhaps necessary to a physician that means to establish himself here" (*Gray*); "a person . . . deriving dignity from a carriage which, while it indicated *deference* to the court, indicated also habitual self-possession and self-*respect*" (*Macaulay*); "*deference* to what appeared to be your desire" (*Washington*). REVERENCE (see REVERENCE) implies profound respect, often mingled with awe or devotion; as, "whereby we may serve God acceptably with *reverence* and godly fear" (*Heb.* xii. 28) "unquestioning, childlike *reverence* for authority" (*T. 2. The doctrine that God exists as a being wholly distinct from the physical universe, of which man is a part, God's operation upon the universe being purely mechanical, — opposed to forms of *theism* which maintain divine immanence. The rationalistic movement known as *English Deism* arose in the 17th century and continued almost through the 18th. Prominent deists were Lord Herbert, "the Father of Deism" (1583-1648), Blount (1654-93), Tindal (1653?-1733), Woolston (1699-1733), Toland (1670-1722), Shaftesbury (1671-1713), Bolingbroke (1678-1751), Collins (1676-1729), and Chubb (1679-1747). These men held very diverse opinions, some inclining to a rationalistic Christianity, some to materialistic infidelity; but they were agreed in that they sought to construct a natural religion by the light of reason alone, totally discrediting revelation. The Copernican theory of the universe, the physical doctrines of Descartes and Newton, and the philosophical teachings of Hobbes and Locke furnished their starting point.

de-lict' (dĕ-lĭkt'), *n.* [L. *delictum* fault.] *Law.* An offense or transgression against law; — in its widest use including crimes and misdemeanors, but chiefly used in the Civil and Scots law to designate civil wrongs corresponding closely to the torts of English law, and in the French law (F. *délit*), to designate the milder crimes, which are punishable with imprisonment over a week and under five years. In the early civil law many offenses were classed as civil wrongs which modern law treats as crimes or public offenses.

Delicts proper embrace all breaches of the law which expose their perpetrator to criminal punishment. The term quasi *delict* is generally applied to any violation of the common or statute law which does not infer criminal consequences, and does not consist in the breach of any contract, express or implied. Cases may and often do occur in which it is exceedingly difficult to draw the line between *delicts* and quasi *delicts*. The latter class, as it has been developed in the course of the present century, covered a great variety of acts and omissions, ranging from deliberate breaches of the law, closely bordering upon crime, to breaches comparatively venial and involving no moral delinquency. *Palmer* v. *Wick & Co A. C.* 326 (1894).

According to the more usual tradition Apollo wrested it by force from Gæa. He shared it, however, with Dionysus, who was said to be buried at Delphi. The oracles were given forth by a priestess, the *Pythia*, who (according to a late tradition) seated herself upon a golden tripod above a chasm whence issued mephitic vapors. The shape of the delta as a whole is determined largely by the configuration of the coast line where it is formed. In order to form a delta, a river must not only carry sediment, but must discharge it where it will not be swept away as fast as it accumulates. Deltas are formed on open coasts, more commonly in bays and lakes, and occasionally where one river joins another. The delta of the Mississippi has an estimated area of more than 12,000 square miles and is advancing into the Gulf at the annual rate of about 260 feet. **c** An alluvial fan (see under ALLUVIAL); — called specif. *fan delta* or *cone delta.* **d** *Phon.* The pharynx, the mouth passage, and the nasal passages, taken collectively. *Hempl.*

Among peoples in both hemispheres are found deluge traditions which are diverse in origin but are generally considered to be based directly or indirectly on actual floods. Geological evidence regarding a widespread inundation of Europe or Asia is negative See DEUCALION, UT-NAPISHTIM, XISUTHROS.

Syn. — DELUSION, ILLUSION, HALLUCINATION are here compared in their nontechnical connotations (for technical distinctions, see defs.); they agree in the idea of false seeming. DELUSION is, in general, a much stronger word than ILLUSION. It often carries an implication of being deceived (cf. DELUDE, *v.*), imposed on, or even consciously misled and bemocked, from which *illusion* is ordinarily free. Further, *delusion* implies a false (often harmful) impression, commonly regarding things themselves real, *illusion*, an ascription of reality (often pleasing) to that which exists only in the fancy; as, "It is all magic, poor deluded fool! She looks to every one like his first love. . . . These pleasures end in *delusion*" (*Shelley*); "The *illusions* of Chloe and Strephon have been sufficiently consecrated in poetry" (*G. Eliot*); the *delusions* of stockjobbing, to labor under a *delusion*; the *illusions* of fancy, of hope, an optical *illusion*: cf. the effect of Wordsworth's substitution of *illusion* for *delusion* in the line, "Such, in the fond *illusion* [orig. *delusion*] of my heart, such picture would I at that time have made." HALLUCINATION, as here compared, emphasizes the groundlessness of the impression; as, "Reason . . . is not swept away by the *hallucinations* of sentiment" (*R. A. Vaughan*). See FALLACY, FALLACIOUS, FICTION.
It had all been a voluntary, self-created *delusion*, each trifling circumstance receiving importance from an imagination resolved on alarm, and everything forced to bend to one purpose by a mind which, before she entered the Abbey, had been craving to be frightened. *Jane Austen.*
As those *illusions* [of youth] are unavoidable, and, no doubt, eminently useful to the mind as a process, what good can be gained by making observations, the tendency of which is to diminish the confidence of youth in its feelings, and thus to abridge its innocent and even profitable pleasures? *Wordsworth.*

A *democracy* in which all the population participate in the sovereignty is theoretical, since children and slaves are always excluded, and usually women, even in the primitive forms, such as the Athenian democracy, where the governing powers are directly exercised by the assembled people. In modern representative democracies, as the United States and France, though the governing body, that is, the electorate, is a minority of the total population, the principle on which the government is based is popular sovereignty, which distinguishes them from *aristocracies*.

☞ In this sense, and esp. in reference to Greek thought, the forms *daimon* and *daemon* (pl. DAIMONES [dī'mō-nēz] or DÆMONES [dē'mō-nēz]) are often preferred to avoid the implication of a necessarily evil or malevolent nature.

de/no-ta'tion (dē/nō-tā/shŭn), *n.* [L. *denotatio*: cf. F. *dénotation*.] **1.** The marking off or separation of anything. **2.** That by which anything is marked off; a sign, indication, or token; a name or designation. **3.** Meaning or signification. **4.** *Logic.* The individuals or instances falling under any conception or term and so, partly at least, definable by it; extension; — contrasted with *connotation*.

Extension or *denotation* consists of the instances, ideal or actual, in which any content is considered as realized or realizable. *B. Bosanquet*

Syn. — DENOTATION, CONNOTATION. The DENOTATION of a word is its actual meaning; its CONNOTATION, that which it suggests or implies in addition to its actual meaning. Thus, in the line: "Nor all the drowsy sirups of the world" (*Shak.*), the *denotation* of "sirup" is the idea of a thick, viscid, saccharine solution; the following comment brings out its *connotation*: "'Sirup' . . . is not 'juice,' or 'potion,' or 'essence,' or 'extract,' nor anything but that heavy liquid sweetness whose very sluggishness suggests its power in reserve, whose inertness by contrast renders its essence more quick, and it is redolent of its home in the East" (*H. H. Furness*).

Every word we use must in greater or less degree possess two distinct traits — *denotation* and *connotation*. It *denotes* the idea which good use agrees that it shall stand for; it *connotes* the very various and subtle thoughts and emotions which cluster about that idea in the human mind, whose store of thought is so vastly greater than its store of words with which to symbolize thought. *B. Wendell*

The power of such *connotations* becomes very great when the word is an old one, which has been much used, and is in some manner, therefore, bound up with the most intense experiences of great numbers of men. *G. L. Kittredge*

de-not'a-tive (dē-nōt'ā-tĭv), *a.* **1.** Having power to denote; designating or marking off.

Proper names are preëminently *denotative*, telling us that such an object has such a term to denote it, but telling us nothing as to any single attribute. *Latham.*

2. *Logic.* Bearing a logical denotation.

It is urged that his graduated world of ideas ascends by steps from the less to the more general, ever more and more widely *denotative*, less and less fully connotative *J Martineau.*

DECADENCE implies a falling away from a state or condition of excellence; as, the *decadence* of a nation, or a language, of literature or art. *Degeneration* and *decadence*, with their respective adjectives, have gained large vogue as pseudo-scientific designations for certain *fin de siècle* tendencies in literature and art. See CORRUPT, ABASE.

2. *Math* The sum of all possible ($\frac{n}{2}$) products of n^2 symbols, conventionally arranged in a square block of n columns and n rows, formed by taking one and only one symbol from each column and each row, and marked + or − according as the number of derangements in the order of the columns (or rows) is even or odd, the order of the rows (or columns) being held fixed and natural. Thus $\begin{vmatrix} a_1 & a_2 & a_3 \\ b_1 & b_2 & b_3 \\ c_1 & c_2 & c_3 \end{vmatrix}$ is a determinant of 3d order or degree, and expanded is $a_1b_2c_3 - a_1b_3c_2 + a_2b_3c_1 - a_2b_1c_3 + a_3b_1c_2 - a_3b_2c_1$. The symbols are called *constituents*, the products *elements*, the oblique line of *leading constituents* from the left uppermost to the right lowermost is the *principal diagonal;* the *diagonal* through the other two corners is *secondary;* the number of the rows (or columns) gives the *order* or *degree* of the determinant. Determinants were discovered by Leibnitz (1693), rediscovered by Cramer (1750), named in a narrower sense of quadratic forms by Gauss (1801), renamed "determinants" by Cauchy (1813), powerfully employed by Jacobi (1823) and his successors.

G. *teufel*, Goth. *diabaulus*); L. *diabolus*, Gr. διάβολος the devil, the slanderer, fr. διαβάλλειν to slander, calumniate, orig., to throw across; διά across + βάλλειν to throw, let fall, fall; cf. Skr. *gal* to fall. Cf. DIABOLIC.] **1.** [*cap. or l. c.*] In Jewish and Christian theology, the personal supreme spirit of evil and unrighteousness; the tempter and spiritual enemy of mankind; the adversary of God, although subordinate to Him and able to act only by His sufferance. He is represented as the leader or prince of all the apostate angels and as the ruler of hell or the place provided for the punishment after death of the wicked. In the Middle Ages he was generally represented as having horns, a tail (sometimes forked), and cloven hoofs, but he was thought to be able to assume any disguise at will. The Hebrew *sātān* of the Old Testament was translated by the Septuagint as Greek διάβολος, an accuser or slanderer, devil, but in the Vulgate *Satan* was substituted, *Devil* occurring but four times in the Authorized Version of the Old Testament, twice as a translation of *sairim* and twice of *shedim*, Hebrew words which in the Revised Version are translated respectively as *he-goats*, or *satyrs*, and *demons*. In the New Testament the Greek διάβολος occurs thirty-five times, and in each case is translated *the devil*, referring to Satan. Where one of the lesser evil spirits is referred to, the Greek word δαιμόνιον or δαίμων, *demon*, is used and translated *devil*. Cf. DEMON. Other names more or less closely identified with *Devil* are *Apollyon, Beelzebub, Lucifer*; and the Devil is designated by many descriptive appellations, such as the *Arch Enemy*, the *Arch Fiend*; and familiarly by various nicknames, as *Auld Clootie, Old Nick, Old Boy*, etc.

5. Right-handed. *Rare.*
Syn. — Skillful, adept, expert, ready, apt, quick. — DEXTEROUS, ADROIT, DEFT, CLEVER agree in the idea of mental or (by transfer) mental readiness or skill. DEXTEROUS implies sureness and lightness in manipulation or contrivance, without especially suggesting resistance to be overcome; ADROIT implies skill and address in handling a situation, esp. in case of difficulty or danger. *Dexterous* connotes expertness; *adroit*, rather nicety of perception or tact. DEFT adds to *dexterous* the implication of neatness, particularly in manipulation. While *deft* is rarely used figuratively, CLEVER has almost wholly transferred its sense of readiness, quickness, from the hand to the head, but has become, through its frequent suggestion of the absence of the higher organizing or creative powers, a term of rather faint praise. See SKILLFUL, EXPERT, INGENIOUS, SMART.

2. An ancient Italian goddess whose worship was early widespread throughout the peninsula. The most famous of her early shrines was a grove near Aricia (the *Nemus Dianæ*) on the shores of a lake in the Alban Mountains called the "Mirror of Diana" (*Speculum Dianæ,* now "Lago di Nemi"), where the goddess (*Diana Nemorensis*) was worshiped both as a deity of the wood and as helper of women in childbirth. With her were associated a water nymph, Egeria, and a sylvan deity, Virbius, whom late legend identified as the Greek *Hippolytus* brought to life by Æsculapus and hidden in the grove by the goddess. The officiating priest was the "King of the Wood" (*Rex Nemorensis*), and to hold the office he must have slain in duel his predecessor after having first plucked a certain bough in the grove (traditionally the "golden bough") plucked by Æneas before entering the underworld. The worship of Diana was brought to Rome by the Tarquins, her temple being the first dedicated to one of the *di novensides.* With the introduction of the Greek Apollo and Artemis, 399 B. C., Diana was identified with Artemis (which see), and like her represented as a huntress.

2. *Anat* The muscular and tendinous partition separating the cavity of the chest from that of the abdomen; the midriff. It is characteristic of mammals, though present in a very rudimentary state in birds. In man it consists of a central tendinous part, the *cordiform tendon*, from which muscular fibers radiate to the walls of the body. Its position is oblique, lower behind than in front, and it is attached to the ensiform cartilage, the six or seven lower ribs and their cartilages, and to the lumbar vertebræ. There are three large openings in it, the aortic, the esophageal, and that for the vena cava. The diaphragm is convex upward; when it contracts it becomes flatter, increasing the capacity of the thorax. It is a most important muscle in inspiration, defecation, parturition, and other processes. Hiccups are due to its spasmodic contraction.

Thus, if the focal length of the lens is 6 inches, and the diameter of the aperture ¼ inch, the diaphragm may be marked $f/12$. Diaphragms are also marked with reference to the effective aperture of the lens as determined experimentally or by some number in an arbitrary scale. See UNIFORM SYSTEM.

Kings, in receiving justice and undergoing trial, are not *differenced* from the meanest subject. *Milton*

2 *Her.* To make a heraldic difference in; as, the eldest son bears his father's arms *differenced* by a label. Arms may be differenced in any of various ways, as by changing tinctures, minor charges, the boundary lines of an ordinary, etc.; by the addition of a label, of small charges to the field or surmounting an ordinary, of a canton or quarter, of an escutcheon (not en surtout), of quarters, etc.; by diminishing the number of charges; by the use of the bordure, of marks of cadency, or the like

Differencing, as distinct from cadency, implies, first, the treatment of coats of arms and other armorial insignia, that denote and are based upon feudal alliance or dependency, but without blood relationship; and, secondly, it also implies a comprehensive system of distinguishing similar arms, when they are borne by individuals or families between whom no kind of alliance is known to have existed. *C. Boutell.*

3. *Math.* To find the difference, or to compute and tabulate the successive differences, of (a function).

dif'fer-ent (dĭf'ẽr-ẽnt), *a.* [F. *différent*, L. *differens*, *-entis*, p. pr. of *differe*.] **1.** Of various or contrary nature, form, or quality; partially or totally unlike; dissimilar; as, *different* kinds of food or drink; *different* shapes; *different* degrees of excellence; — usually followed by *from*, but also by *to*, esp. colloquially in England, and by *than*. The constructions with *to* and *than* have long literary usage to support them, but are considered incorrect or less elegant by many.

Men are as *different* from each other, as the regions in which they are born are *different*. *Dryden.*

2. Distinct, separate; not the same, other. "Five *different* churches." *Addison.*

Syn. — Unlike, dissimilar, variant, divergent, diversified, variegated, manifold, several, divers, sundry, many. — DIFFERENT, DIVERSE, DISPARATE, VARIOUS. DIFFERENT (*from*; in England, also *to*), the general term, may denote unlikeness of whatever sort; as, "I suppose, sir, you are an American . . because . . . you speak neither English nor Scotch, but something *different from* both" (*Boswell*); "How *different to* your brother and mine" (*Jane Austen*). DIVERSE (cf. DIVERS, which now expresses little more than plurality; as, on *divers* occasions) is stronger, and implies marked difference, or even divergence; as, "I obtained from three cultivated Englishmen at *different* times three *diverse* pronunciations of a single word" (*Lowell*); "The minds of mortals are so *different* and bent on such *diverse* journeys" (*Keats*). DISPARATE (see DISPARITY) implies absolute or essential difference, often as between incongruous or incompatible things or ideas; as, "two divergent, yet not wholly *disparate* emotions" (*F. W. H. Myers*); "For if men are so *diverse*, not less *disparate* are the many men who keep discordant company within each one of us" (*W. Pater*). VARIOUS (see VARIETY) commonly lays more stress than *different* on the number of sorts or kinds; it frequently suggests the diversified character of things rather than their absolute diversity; as, "in *various* shapes of Parsons, Critics, Beaus" (*Pope*); "the world, which seems to lie before us like a land of dreams, so *various*, so beautiful, so new" (*M. Arnold*). *Various*, like *divers* (so also *sundry*, *several*), is sometimes attenuated to a mere indefinite expression of number; as, *various* people spoke to me about it. See DISTINCT, DIFFERENCE, DIFFER, cf. IDENTICAL.

S. Mill*

dif'fer-en'tial (dĭf'ẽr-ẽn'shăl), *n.* **1.** *Math.* An infinitesimal, or arbitrarily small, change assigned to a variable. According to the more modern writers upon the calculus, if two or more quantities are dependent on each other, and subject to corresponding changes of value, their *differentials* need not be small, but may be any quantities the limits of whose ratios to each other are the limits of the ratios of the changes as these changes approach zero indefinitely. Differentials (of x) are usually denoted by dx, sometimes by δx or h.

Even the simplest unicellular organisms rarely fail to exhibit some indications of differentiation of parts or organs. In multicellular organisms differentiation begins at a very early stage of the embryo, the formation of the germ layers (see GERM LAYER) being in many animals the first conspicuous manifestation of the process. It differs from simple *growth*, in that the cells when they divide produce cells unlike themselves.

5. *Math.* The degree of manifoldness of a magnitude or aggregate as fixed by the number of determinations or conditions necessary and sufficient to distinguish any one of its elements from all others. Thus time or a line has only one dimension (in instants or points); a surface has two dimensions, as the surface of a sphere, to fix a point on which we need to know its latitude and longitude; space about us has three dimensions, since to fix one of its points, as a star, we must know its right ascension and declination and distance. But space conceived as composed not of points but of lines is four-dimensional, since four determinations are necessary to fix a line in space. So a plane viewed as made up of circles has three dimensions, since two determinations fix the center and one more the radius of a circle. In general, a magnitude is of varying dimensions according to the elements of which it is made up. The simplest and most commonly used element is the *point.* Space of four dimensions, in the ordinary sense, is a point space, consisting of a fourfold infinity of points, and so for higher spaces of n dimensions.

6. *Alg.* A literal factor, as numbered in characterizing a term. The term *dimensions* forms with the cardinal numbers a phrase equivalent to *degree* with the ordinal; thus, a^2b^2c is a term of five *dimensions,* or of the fifth degree.

7. *pl. Mech.* The manifoldness or degree with which the fundamental units of time, length, and mass enter into the units of other physical quantities. Thus, since the unit of velocity varies directly as the unit of length and inversely as the unit of time, the *dimensions* of velocity are said to be *length* ÷ *time;* the *dimensions* of work are *mass* × $(length)^2$ ÷ $(time)^2$; the *dimensions* of density are *mass* ÷ $(length)^3$, or one in mass and minus three in length (written as a *dimensional equation* $D = ML^{-3}$, D representing density, M mass, and L length).

Di'no-sau'ri-a (-sô'rĭ-*a*), *n. pl.* [NL.; *dino-* + Gr. σαῦρος lizard.] *Paleon.* A subclass or order of reptiles, which appeared in the Trias and became extinct with the close of the Mesozoic. They were nearly world-wide in distribution, but their remains are especially numerous and well preserved in some of the western United States. The earlier types are closely related to the early Crocodilia and Rhynchocephalia. Later they became more specialized, and developed many characters, especially in the structure of the pelvis and hind limbs, which have led them to be regarded as ancestors of the birds, but this view is unwarranted. Many of them had hollow bones. They all had limbs adapted for progressing on land, and a long tapering tail, and in many the hind limbs are much longer and stouter than the fore limbs. Such forms walked chiefly or entirely on the hind limbs like birds, and to this many of their birdlike modifications were due. Others walked on all four limbs. Some Dinosauria were carnivorous; the largest were herbivorous. They varied in size from species but two or three feet long to others at least 60 or 70 feet in length, which are the largest known land animals, rivaling the largest whales in length, though not in bulk. The principal groups are Theropoda, Sauropoda, Ornithopoda, Stegosauria, and Ceratopsia. See these terms.

Syn. —DINT, DENT, INDENTATION, NICK, NOTCH. *Dint* and *dent* apply chiefly to surfaces, *indentation*, *nick*, and *notch* more frequently to edges. DINT and DENT refer (the first both lit. and fig., the second only lit.) to a depression made by a blow; as, a *dint* (or *dent*) in a teakettle; "a *dint* in a character" (*S. Wilberforce*). An INDENTATION is a toothlike or angular recess or incision; as, the *indentations* of a leaf, of a coast. NICK and NOTCH are less formal than *indentation*; *nock* usually suggests a slighter cut or hollow (often the result of accident) than *notch* (which commonly implies intention); as, a *nick* in a teacup, in a knife blade; the *notch* of an arrow, to keep tally by cutting *notches* in a stick; cf. When a point describes a straight line, that line gives the *direction* of the motion of the point at every instant. When a point describes a curve, the *direction* of its motion is at each instant that of the corresponding tangent to the curve. The aspect of progression is usually implicit in *direction*. Thus, in a straight line *AB*, the *direction* from *A* to *B* is the reverse (or opposite in sign) of that from *B* to *A*. See ORIENTATION.

FILTHY applies to that which is besmeared or polluted with dirt or filth; as, *filthy* rags, a *filthy* hovel. NASTY applies to that which is grossly or revoltingly offensive, esp. to touch or smell. In English colloquial usage it has been softened to a mere synonym for "objectionable, disagreeable" (as, a *nasty* day, a *nasty* fall, a *nasty* temper, to be *nasty* to some one); in the U. S. it has been commonly tabooed in polite speech, but is now somewhat affected in its English sense. The standard type of disappearing carriage in the coast artillery of the United States army is the **Buffington-Crozier carriage,** in which the gun trunnions are secured at the upper and after ends of a pair of heavy levers, at the lower ends of which is attached a counterweight of lead. The levers are pivoted at their middle points, which are, with the top carriage, permitted restrained motion along the slightly inclined chassis rails. The counterweight is held in place by a pawl and ratchet. When the gun is loaded the pawl is released and the counterweight sinks, raising the gun to the firing position above the parapet. The recoil following the discharge returns the gun to the loading position, the counterweight rising until the pawl engages the ratchet.

Syn. — Hide, conceal, mask, counterfeit, cover. — DISSEMBLE, DISGUISE, CLOAK agree in the idea of simulation for the sake of concealment. DISSEMBLE implies an assumed or artfully feigned semblance or pretense; DISGUISE (as here compared), a more unequivocal counterfeiting or change of outward appearance; as, "Ross bears, or *dissembles*, his disappointment better than I expected of him" (*Gray*); "Several are of opinion that the fair sex are not altogether strangers to the art of *dissembling* and concealing their thoughts" (*Spectator*); "We must . . . make our faces vizards to our hearts, *disguising* what they are" (*Shak.*); "Confess 't is fear *disguised* from its own shame that takes the mantle now of thin remorse" (*Shelley*). CLOAK (see PALLIATE) stresses the idea of hiding or concealment; as, "The Scripture moveth us . . . to acknowledge and confess our manifold sins and wickedness; and that we should not *dissemble* nor *cloak* them before the face of Almighty God" (*Bk. of Com. Prayer*); cf. "Not using your liberty for a *cloak* of maliciousness" (1 *Pet.* ii. 16). See ASSUME, SIMULATION, HIDE, SECRET.

(2) For any three collinear points the sum of the distances (with proper signs) is 0, or $PQ + QR = PR$. (3) If A, B, C be any three points, then if two of the distances be finite, so is the third, if one be infinite, so is another; if two be real, so is the third.

See DIVINE, *a.*] **1.** The act of divining; a foreseeing or foretelling of future events or of discovering hidden knowledge. Divination is a world-wide practice resting upon the assumption of the active coöperation of unseen powers in the divinatory rites. These rites are of two main types: (1) Those depending upon the psychical condition of the diviner, including: divination through inspiration or divine enthusiasm, as in the case of the Pythia who uttered the oracles of Apollo at Delphi; through dreams, esp. at the shrine of a deity; through trances and mediumship, as in modern spiritualism; through crystal gazing (see CRYSTAL VISION), and other means of inducing hallucinatory images. (2) Those taking the form of magic and mantic arts, such as: the study of omens, esp. the inspection of the entrails of sacrificed animals, the flight of birds, the fall of talismans, cards, etc. (cf. AUGURY); the study of natural phenomena and portents, as in astrology, palmistry, etc.; sortilege, or the casting of lots (gambling itself among the lower races being deemed to be under the direction of unseen powers); ordeals, esp. for the determination of guilt or innocence, and including the ordeal by combat. Cf. MAGIC.

We *do* you to wit [i. e., We *make* you to know] of the grace of God bestowed on the churches of Macedonia. 2 *Cor.* VIII. 1

☞ We have lost the idiom shown by the first citation (*do* used like the French *faire* or *laisser*), in which the verb in the infinitive apparently, but not really, has a passive signification, i. e., cause . . . to be made.

☞ *Do* is used as an auxiliary with the simple infinitive of other verbs to form a periphrastic present and preterit indicative, and imperative: **a** In affirmative sentences these present and preterit tenses were originally, but now only in archaic or dial. Eng., used without any distinctive force from that of the simple forms; they are now the normal form in inverted constructions and in emphatic assertion.

I *do* set my bow in the cloud. *Gen.* ix. 13.
Rarely . . . *did* the wrongs of individuals come to the knowledge of the public. *Macaulay.*
You don't say so, Mr. Jobson. — But I *do* say so. *Scott.*

b In interrogative sentences these tenses are now the normal form, having the advantage over the simple form that they keep the order, subject, verb, object, or complement; thus cf. *do* you *see* it? with, *see* you it? **c** So also in negative sentences with *not*; as, *We do not see*, instead of the obsolete *We ne see* or the archaic or poetic *We see not*; *Do you not see?* instead of *See you not?* **d** In imperative sentences *do* adds force to entreaty or exhortation; as, *do* help me; *do* go; and makes the normal modern form with *not.* It may be added to an imperative verb; as, be quiet, *do!* It was formerly also used alone as an exclamation of encouragement.

☞ The verb *be* does not take *do* as auxiliary, except in the imperative; as, *do* be quiet! *don't* be anxious! *Do* is often used, either transitively or intransitively, as a general substitute verb, to save repetition of a principal verb. In many such cases the construction is explained simply as a periphrastic tense, with the principal verb to be supplied.

When beauty lived and died as flowers *do* now. *Shak.*
I . . . chose my wife as she *did* her wedding gown. *Goldsmith.*

Their theories were ridiculed by the extremists on both sides.
The doctrine, or fundamental principle, on which its [the Doctrinaire party's] action was based was that the sole justification of any form of government was the manner in which it exercised its power. Rejecting the claim of divine right, whether urged for monarchy or for republicanism, the *Doctrinaires* were opposed alike to the ultra-royalists and to the revolutionists.

dog days. A period of from four to six weeks, variously placed between the early part of July and the early part of September; canicular days; — so called because reckoned in ancient times from the heliacal rising of the Dog Star (Sirius). Popularly, the sultry, close part of the summer, when dogs are supposed to be specially liable to go mad. The conjunction of the rising of the Dog Star with the rising of the sun was regarded by the ancients as one of the causes of the sultry heat of summer, and of the maladies which then prevailed. But, as the conjunction does not occur at the same time in all latitudes, and is constantly changing in the same region, there has been much variation in calendars regarding the limits of the dog days. Some dates that have been given by Roger Long (1680–1770) as the beginning of dog days are: about 735 A. D., July 14th; 16th century, July 6th; 1660–1752, July 19th; after 1752, July 30th. dominical altar, *Eccl.*, the high altar. — **d. day**, Sunday. — **d. letter**, the letter which, in almanacs, denotes Sunday, or the Lord's Day (*Dominica dies*), chiefly used to aid in finding the date of Easter. The first seven letters of the alphabet are used to designate the first seven days of the year and are repeated throughout the year, the same letter thus standing for Sunday during the year (except in a leap year, when, on account of the intercalary day, the letter for the remainder of the year differs from that for the first two months). The dominical letter for any given year is the letter preceding that for the year before, unless the year is a leap year, when the letter for January and February is the first one, and that for the remainder of the year the second one, before the letter for the previous year. Thus the dominical letter for 1910 is B; 1911, A; 1912, G (Jan. & Feb.) and F; and 1913, E. After 28 years, unless a centurial year which is not a leap year (as 1900) is included, the letters return in the same order. The chief articles enjoined silence, much fasting, complete abstinence from meat except in serious illness, the use of woolen instead of linen garments, a rigorous poverty, and many other austerities. The dress was at first a black cassock and rochet, but it was soon exchanged for the white habit and scapular with the long black mantle. It was first stated in 1842 by Christian Doppler, of Prague. It is most simply illustrated in the case of a boat, which in moving against the waves encounters a greater number, and in moving with them a smaller number, than if it remained in one spot. A good example in acoustics is the change of pitch of the whistle of a locomotive that passes at a high rate of speed. In accordance with this principle the lines in a luminous body's spectrum are shifted slightly toward the violet if the body's distance is decreasing, but toward the red if increasing. It has been used in astrophysics to estimate the velocity of luminous bodies.

DOT dowry, DOTATION.] **1.** *Law.* That portion of, or interest in, the real estate of a deceased husband which the law gives to his widow during her life. The right of dower is of ancient origin, and in England before the Dower Act (1834) attached to every estate of inheritance (fee simple or fee tail) of which the husband became seized to which any issue by the wife might possibly have been heir. The estate remained subject to this right except only upon the wife's concurrence in a release, which had to be effected by the recovery of a fine. To remedy the inconvenience occasioned, the Dower Act (which affects only dowers of women married since Jan. 1, 1834) was passed, which enables the husband to cut off the dower by conveyance, will, or declaration, leaving to the widow only dower in those lands of which he dies seized, and to which her right of dower has not been taken away by the husband. The Act extended the dower also to equitable estates of inheritance, and to estates in his right but not in his seizin. The common-law dower, answering to the older dos rationalibus (see DOS), is one third; dower by special custom varies in amount, etc., according to the custom. There were abolished also three older forms of dower: **ad ostium ecclesiæ**, at the church door, i. e. at the marriage; **ex assensu patris**, by the father's assent, i. e. out of his lands; and **de la plus belle**, of the best part (of certain socage lands with release of lands held in chivalry). In the United States dower in general, except as to the method of release by fine, conforms to the English common-law dower, although variously regulated by statutes in the different States. In some States it has been abolished, and the wife has been given a distributive share in the husband's estate. During the husband's life the wife has at common law a vested interest in his dowable property, which is called her *inchoate* right of dower. In Mohammedan law dower is of two classes: *prompt dower* and *deferred dower* (which see).

Syn. — DREAM, VISION, REVERIE. DREAM is the general term for the ideas or images present to the mind in sleep; a VISION is an appearance (commonly thought of as supernatural, mysterious, or symbolic) presenting itself to the inner (or sometimes the bodily) eye, either in sleep or in an exalted waking mood; as, "Thus have I had thee, as a *dream* doth flatter, in sleep a king, but waking no such matter" (*Shak.*), "Then was the secret revealed unto Daniel in a night *vision*" (*Dan.* ii. 19); "He saw in a *vision* evidently about the ninth hour of the day an angel of God coming in to him" (*Acts* x. 3). Fig., *dream* (so also *dreamy*) suggests vague or idle, commonly happy, anticipation; *vision* (cf. VISIONARY), more definite or elaborate pictures conjured up by the fancy; as, "childhood's sunny *dream*" (*Shelley*); "the chymist's golden *dream*" (*Cowper*); "*dreams* of the ideal" (*Whitman*); cf. *daydreams; visions* of untold wealth floated before his mind; cheered on by *visions* of the well-spread board and blazing fire awaiting him. REVERIE is a waking dream; as, "Dream Children; a *Revery*" [title] (*Lamb*); "*Reveries* of a Bachelor" [title] (*D. G. Mitchell*). See DELUSION, VISIONARY.
